- NS-6—6" extension, with 1/2" Sq. Hole in handle, 1/2" Sq. Connection

P & C Tools are the choice of thousands of AUTOMOBILE, AIRPLANE, and other mechanics. They give as the reason; "THE BEST MONEY CAN BUY."

The designing and producing of these tools is in the hands of experts. Only the best of ALLOY STEEL is used in their manufacture, and each tool is carefully heat treated and tempered, by electric process and skilled heat treaters. They are designed so as to give those exceptional qualities the mechanics refer to in such terms as; "FEEL RIGHT," "HANG RIGHT," "NOT CLUMSY," "MORE SPEED WITH THOSE TOOLS," "ENGINEERED TO THE JOB."

In this little booklet, it is only possible to show a few of the numbers in the P & C LINE. In all there are well over a thousand numbers. There is a constant demand for new tools of special design, and whenever a special tool is needed P & C will make it.

P&C TOOLS are guaranteed to be free from defects in material or workmanship and any tool proving defective will be replaced or repaired free of charge.

P&C TOOLS are imitated by unscrupulous persons, therefore the purchaser should protect his purchases by insisting on GENUINE P&C TOOLS and not imitations. "Imitation is the sincerest form of flattery" but unless the purchaser insists on knowing that he is dealing with an AUTHORIZED P&C representative he may fall a victim to the practices of the imitators. P&C TOOLS are manufactured at Milwaukie (Portland Suburb) Oregon, and at no other place.

For more complete information regarding the P&C LINE, write to the distributor named below or to the factory. You will find it profitable to allow the P&C Salesman to tell you about the line. He is a skilled tool specialist and at your service.
